856. Score of Parentheses

Medium 4210 133 Add to List Share

Given a balanced parentheses string `s`, return *the score of the string*.

The **score** of a balanced parentheses string is based on the following rule:

- "(" has score 1 .
- AB has score $A + B$, where A and B are balanced parentheses strings.
- (A) has score $2 * A$, where A is a balanced parentheses string.

Example 1:

Input: `s = "()"`

Output: 1

Example 2:

Input: `s = "((()))"`

Output: 2

Example 3:

Input: `s = "()()"`

Output: 2

Constraints:

- `2 <= s.length <= 50`
- `s` consists of only `'('` and `')'`.
- `s` is a balanced parentheses string.
